

Opportunities Associated with Electromobility in the Canton of Graubünden

What are the risks and opportunities associated with electromobility in the Canton of Graubünden in the light of the specific challenges faced by mountainous regions?

Working on behalf of the Canton of Graubünden, EBP is helping to identify and evaluate the risks and opportunities associated with the development of the electromobility sector. The future development of electromobility in the Canton is assessed on the basis of three scenarios. In each case, the specific challenges faced by mountainous regions are taken into consideration. Viable courses of action at the cantonal level are identified and presented on the basis of our findings.
