

Digital building information over the full lifecycle

Swiss Federal Railways (SBB) has set a target of fully digitizing and integrating all of its building and asset management data by 2025 throughout the entire lifecycle of its properties. We are supporting SBB in the 'BIM AIM - Digital Design, Construction and Operation' project through the conceptualization and development of a building information modeling (BIM) platform. To this end, we are developing a test platform, advising on the selection of BIM systems, and creating solutions to connect surrounding systems.

Our services

- Establishing and operating a test and training environment for BIM tools
- Advising pilot projects in the selection of suitable BIM software
- Developing solution concepts, for instance for quality assurance of building information

Client

Swiss Federal Railways (SBB)

Facts

Period 2019 - 2025

Project Country Switzerland
