

Making future erosion tangible with infographics

For the Swiss National Cooperative for the Disposal of Radioactive Waste (NAGRA), we are developing an infographic that explains the calculation of future erosion at three locations identified as possible sites for a deep geological repository. The infographic consists of a series of increasingly complex illustrations aimed to make the complex calculations and analyses accessible to those interested with different levels of prior knowledge. The aim is to show how the calculation models are interrelated and what results are generated with calculations.

Our services

- Preparing the complex topic and research process for presentation to the general public
- Breakdown of the data according to relevance for various target groups
- Visual representation of research findings in the form of infographics
- Creating detailed illustrations of the relevant scientific concepts

Client

Swiss National Cooperative for the Disposal of Radioactive Waste (NAGRA)

Facts

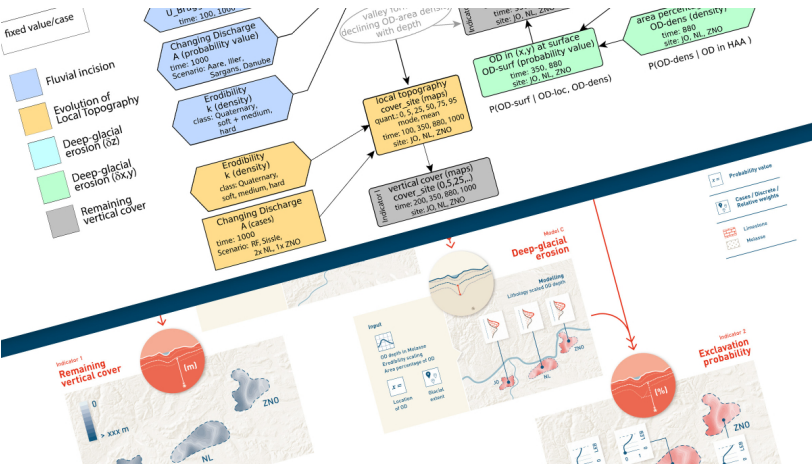

Period 2022 - 2023
