

# Evaluation of the National Action Plan against Noise

**In 2017, the Swiss Federal Council adopted the National Action Plan to Reduce Noise Pollution in order to protect the population in a targeted manner from harmful and annoying noise. On behalf of the Federal Office for the Environment, EBP in cooperation with Interface is evaluating the action plan. The evaluation is intended to show the effects and impact of individual measures and of the action plan as a whole, and to identify starting points for optimization.**

## Our services

- Defining the detailed evaluation concept
- Conducting interviews and in-depth focus group discussions, supplemented by document and data analysis
- Assessing the measures on the basis of a comprehensive set of criteria
- Presenting and validating the results and recommendations with a sounding board
- Reporting
