

Supporting the Digitalization of Municipalities

The requirements and pace of digitalization, along with the use of new tools, pose a double challenge for municipalities, in terms of both the internal organization and the various stakeholder groups and their often sensitive data. We help municipalities to quickly and accurately assess the challenges and develop measures for employees, stakeholders, acceptance and application. Our support equips municipalities to master the complex challenges.

Our services

- Supporting municipal digitalization projects with a “human focus”
- Creating the transformation concept and oversight of change processes
- Developing measures for greater employee and public acceptance of change
- Organizing and holding workshops to promote cohesion, cooperation and cultural development
