

Expert reports/mandates to provide expert advice (Infrastructure)

In the context of planning for and realizing large infrastructure projects, clients are often required, or wish, to have individual buildings or project matters examined or verified by independent experts. The scope of such examinations may include project procedures, design and execution plans, structural calculations, project documents and the handling of key construction and assembly tasks.

We have a large pool of certified and experienced specialists who offer their expert knowledge in all areas of infrastructure development. Our services include:

- Design review and verification services
- Certified appraisers as per the guidelines issued by the Swiss Federal Office of Transport for independent inspection agencies
- Expert appraisal of insurance-related cases of damage
- Second opinions concerning specific matters
- Inspection and management of key construction and assembly tasks
- Reviews of scheduling and total-cost forecasts for infrastructure projects
- Review of cost estimates
