

Area-wide planning

Land is in great demand as a resource in many countries. Regional entities are faced with the challenge of responding appropriately to this situation. We support regional entities, e.g. Swiss cantons, in the preparation, implementation and further development of their planning tools and bases.

We provide our clients with the following services within the scope of cantonal planning:

- Development of spatial concepts and development strategies
- Elaboration and revision of area-wide long-term plans
- Development of issue-specific strategies
- Creation of guidelines and working tools

Our experience shows that when it comes to area-wide planning, in addition to the expert management of a well-conceived process, the timely involvement of all stakeholders is essential. We will be pleased to assist you.
