

Procurement consulting for Arbon water treatment plant

EBP is supporting Arbon Energie AG in the tendering process for the design and implementation of the engineering works to renew the Arbon lake water treatment plant. EBP will also act as consultant to the client during the implementation phase.

The Arbon lake waterworks treats around 3 million liters of lake water from Lake Constance every year. The Arbon water treatment plant was last renovated in 1994. The treatment process and other plant components such as the electrical and process control technology no longer correspond to the state-of-the-art and have reached the end of their service life. In addition, the building needs to be partially renovated, and the owner, Arbon Energie AG, is making plans to undertake these works.

EBP is supporting Arbon Energie AG in the planning and execution of the tender for the design and implementation of the engineering works, as well as supervising the project execution as the client's consultant. The mandate includes the preparation of all tender documents, the execution of the tender in an open procedure, the evaluation of the bids, and the contract negotiations through to the conclusion of the contract. The support of the client during the project execution phase comprises the SIA phases from preliminary project planning to tendering and includes project controlling, participation in meetings and quality assurance of the project documentation. In addition, EBP will provide legal advice with respect to procurement law.

Client

Arbon Energie AG

Facts

Period	2020
Project Country	Switzerland
Procurement method	open tender
