

Simply calculate climate-friendly catering services

The Consumer Protection Agency of North Rhine-Westphalia has taken on the task of helping the German state's schools, kindergartens, and youth hostels make their catering services more climate-friendly. As a part of this effort, the agency commissioned us to develop a convenient Excel tool to calculate carbon emissions from catering services. The tool we developed takes account of the various factors (e.g. food waste and climate-friendly menus) and allows its users to directly ascertain the carbon impact of proposed and implemented measures.

Our services

- Development of an Excel tool to calculate carbon emissions associated with catering services
- Consideration of various factors such as food waste from serving and leftovers, and developing more climate-friendly menus
- Securing the compatibility of data exports from the waste monitoring system
