

Comprehensive revision of the Urdorf municipal development plan

In the context of a comprehensive revision of its municipal development plan, the town of Urdorf placed a thematic emphasis on transportation based on an integrated transportation concept primarily developed by EBP. The revision also places a special emphasis on the landscape. The development plan now makes a distinction between internal and external landscapes to meet high standards of internal development as well as new aspects such as ecological networks, biodiversity, and heat load.

Our services

- Drafting of a strategy to account for settlement development along with internal and external landscape development as a basis for the municipal development plan
- Drafting of the sections of the municipal development plan relating to settlement, landscape, transportation, public buildings and facilities, and energy
- Organization and moderation of workshops with the municipality's spatial planning work group
- Presentation and moderation of discussions at municipal council meetings
- Conceptualization of the public-participation process (survey, discussion, and informational event)
- Evaluation of all documents drafted for the public disclosure and consultation period, public hearings, and the preliminary cantonal review
