Restoration of the area surrounding the Felsenegg radio tower on the Albis

We planned and supervised the restoration of the building site along the panoramic path on the Albis ridge. This project included the use of the excavated forest soil to landscape the area around the new radio tower. Our design included the site-appropriate and biodiverse planting of trees, shrubs and herbs. Sunny areas were structured with rootstocks and stones to provide additional habitat diversity.

Our services

- Definition of future-oriented and climate-adapted vegetation
- Creation of a landscape design and planting plan
- Compilation of a list of climate change tolerant plant varieties
- Soil monitoring: soil removal, interim storage and recultivation
- Monitoring of plant growth and measures to combat invasive species

Client

Swisscom Broadcast

Facts

Period	2021 - 2022
