

Quick-Check Heat Exposure analyses for real estate portfolios

The Quick-Check Heat Exposure application provides property owners and managers with a quick overview of the heat exposure of properties for entire portfolios throughout Switzerland. The analysis includes property data, climate maps and groundcover situations to give property owners a basis to assess their exposure, make strategic, heat-related decisions as well as to effectively adapt their portfolios to climate change and associated increases in the number and severity of heat waves.

Our services

- Process management, including the organization of a series of workshops
- Completion of Quick-Check reviews with the use of real estate data, climate maps and groundcover information
- Documentation of property heat exposure with overview maps
- Analysis of the potential for redevelopment and sealing of soil
- Drafting of action assessments
- Drafting of coordinated action plans for enhanced groundcover
