

# Decommissioning of Gas Networks Fundamentals

**Many suppliers of gas are currently working on long-term plans to decommission their gas networks. Given a general lack of experience in decommissioning in the industry, we have launched a research project aimed at developing a set of practical decommissioning guidelines. Using real-world networks as a reference, we anticipate the necessary steps, estimate the costs associated with various options, and outline the related public-relations strategies. These fundamentals will enable us to draw up recommendations for suppliers and municipalities as they approach their decommissioning tasks.**

## Our services

- Identification and description of the technical options for decommissioning
- Identifying and surveying the relevant cost categories
- Specification of the decommissioning options for two district gas networks
- Estimating the costs of the decommissioning options
- Surveying gas customer attitudes and fears in conjunction with the University of Applied Sciences and Arts Northwestern Switzerland (FHNW)
- Designing effective public relations strategies based on our survey with the FHNW
- Deriving recommendations for gas suppliers, cities and municipalities
