

Critical Processes and Infrastructure at ETH Zurich

We supported a working group at ETH Zurich in creating an overview of the university's critical processes and infrastructure, which can now be used as a basis to help mitigate potential negative effects in the event of an incident. We also developed measures to strengthen the university's critical processes. Our analysis was based on a business impact analysis (BIA) and the federal government's approach to protecting critical infrastructure.

Our services

- Identifying core processes and necessary resources
- Determining the criticality of the core processes
- Identifying dependencies between the core processes
- Developing measures for increased protection
- Reporting to the Risk Management Commission of ETH Zurich and the ETH Board
- Consulting with ETH Zurich's Financial Services Department and Safety, Security, Health and Environment Department (SSHE)
