

Railway Construction

We offer our clients design, engineering, planning and project-management services to help them complete their various railway construction projects. The scope of our services includes all project phases and all project sizes - from small and straightforward to large and highly complex.

We manage railway projects of various sizes throughout Switzerland and in its neighboring countries.

We are active in the following areas:

- Designing, engineering and planning railway systems
- Streetcar and light-rail systems for urban areas
- Railway infrastructure and equipment
- Railway project management
- General management and support for specific railway-related tasks

We place great value in the cohesive operation of our interdisciplinary teams, which include professionals from various areas, including road construction, foundation engineering, civil engineering and environmental engineering. This allows us to create optimum value for our clients.
