

IT systems for environmental management (Environment)

Whether your work is about agricultural land use, energy efficiency, natural hazards, noise or waterways - our analyses and specialized applications enable you to undertake current-state analyses, monitor changes through time, make predictions, and plan efficient, effective responses.

Our services include:

- **Designing IT** systems that users understand – and enjoy using.
- **Developing custom software** and assisting you with integrating it into your IT infrastructure.
- **Ensuring secure and smooth operation** of the systems and applications we develop.
- Using **data analysis** to extract valuable insights, find answers to your business-relevant questions and provide you with a sound basis for decision-making.
- During transformation or migration processes, **we consult and assist you with analyses, goal definitions, concept development and implementation.**

We specialize in analyzing spatial and temporal data using **geographic information systems** and **real-time systems**.
