Whether you work with agricultural land use, energy efficiency, natural hazards, noise or waterways – our analyses and specialized applications enable you to undertake current-state analyses, monitor changes through time, and plan efficient, effective responses.

Our services include:

- Designing IT systems that users understand and enjoy using.
- Developing custom software and assisting you with integrating it into your IT infrastructure.
- Ensuring secure and smooth operation of the systems and applications we develop.
- Using data analysis to extract valuable insights, find answers to your business-relevant questions and provide you with a sound basis for decision-making.
- During transformation or migration processes, we consult and assist you with analyses, goal definitions, concept development and implementation.

We specialize in analyzing spatial and temporal data using geographic information systems and real-time systems.
