

Lighting concepts for outdoor areas

Light, in both its natural or synthetic form, shapes our perception of space, while well-being, safety and orientation are all inextricably connected to light. We develop lighting concepts for public and private outdoor spaces.

Our holistic concepts are characterized by an ideal fusion of design, innovation and efficiency. Based on the particular needs and requirements of the locality, we create lighting concepts in the context of site and area developments, in dialogue with the relevant stakeholders.

Our services include:

- Analysis of existing outdoor spaces and planning related to lighting issues
- Lighting design in outdoor spaces
- Consulting, expertise, and jury work for private and public developers
- Shade or solar-path analyses
- Monitoring of all construction phases in accordance with SIA
