

# Civil Protection 2030

**What trends will be relevant to future civil protection? And what issues will need to be addressed by the organisations and decision makers responsible? The presentation given by EBP outlines the most important developments and challenges we will face in the future.**

Switzerland is undergoing a process of urbanisation. Its population is growing. Private enterprises are assuming responsibility for an increasing number of security-related tasks. The climate is changing. Information technology is becoming ever more dominant.

These and other megatrends can be expected to play a key role in Switzerland's approach to civil protection in the coming years and decades as the nature of the threats we face continues to change. Moreover, the necessary material and financial resources are becoming scarcer and it is becoming harder to find suitably qualified employees.

What are the most important developments for civil protection? What are the specific challenges associated with these developments? And how should those in charge respond?

On the basis of a trend report drafted by the Futurology Workgroup at EBP, a compelling presentation and analysis of the issues involved has been developed. While the presentation is directed primarily at organisations within the Swiss Civil Protection System and other representative of the Swiss Security Association, it is also suitable for foreign civil protection authorities and agencies.

The length and content of the presentation can be modified to

## Client
