

Tendering for additional purifying stage to eliminate micropollutants in the Sewage Treatment Plant Schönauf

The Water Protection Association of the region Lake Zug-Lake Küssnacht-Lake Aegeri (GVRZ) plans to extend the Sewage Treatment Plant Schönauf with an additional purifying stage for removing trace elements. EBP supports GVRZ with the tendering of the design and implementation consultancy.

With the new water protection law which takes effect on 1 January 2016, 100 waste water treatment plants throughout Switzerland will have to construct an additional purifying stage for removing trace elements. The Water Protection Association of the region Lake Zug-Lake Küssnacht-Lake Aegeri (GVRZ) is already planning today the expansion of the Sewage Treatment Plant Schönauf with such a stage.

EBP supports GVRZ in carrying out the tendering process of the design and implementation consultancy. The mandate includes the elaboration of the tender documents as well as conducting the tendering in an open procedure and the tender evaluation. Giving legal advice is also part of our Mandate.
