

IT systems for mobility and transportation (Transportation)

Whether you deal with commuter flows, field employees, vehicle fleets, transport of hazardous materials, emergency vehicles, rail traffic or air traffic – our analyses and specialized applications enable you to measure, predict and efficiently manage mobility and represent it in real-time.

Our services include:

- **Designing IT systems** that your users understand – and enjoy using.
- **Developing custom software** and assisting you with integrating it into your IT infrastructure.
- **Ensuring secure and smooth operation** of the systems and applications we develop.
- Using **data analysis** to extract valuable insights, find answers to your business-related questions and provide you with a sound basis for decision-making.
- During transformation or migration processes, **we consult and assist you with analyses, goal definitions, concept development and implementation.**

We specialize in **analyzing spatial and temporal data** using **geographic information systems** and **real-time systems**.
